Gravity, 3D Effect and Double Click

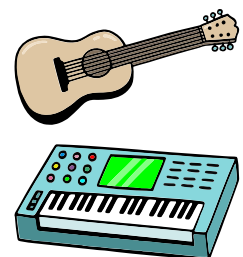

Deep Sea Diver

<https://scratch.mit.edu/projects/491621242>

The diver sinks to the bottom because of gravity. Raise him with the Up arrow and move him left or right with the arrow keys. Moving him keeps him from sinking because of the counter gravity code in the script. 3D effect: The backdrop is vector, so you can bring the rocks and seaweed to the front as a sprite. With layer code you can move the diver behind the rocks and seaweed. Open the project and click See inside.

Bedroom Clutter

3D-Effect is also illustrated in the Bedroom Clutter project, a game element with a musical connection (to suggest an idea). The Bedroom Clutter also illustrates the code to create a **single click** and **double click in Scratch**. See inside and investigate.

For all devices, keyboard or touchscreen Click or Tap twice
