### **Jumping Jockey**

<https://scratch.mit.edu/projects/521295489>

The hedge fence and the backdrop move continuously from right to left. This gives the impression that the horse is galloping. The player clicks the spacebar (or horse) to make it jump the fence to score a point. Because the jockey is further to the back of the horse than its nose and front hoof, the horse may touch the fence but not the jockey! If the jockey's leg touches the fence the game is over. See inside to see how the jockey is a separate sprite that is attached to the horse sprite. In the touchscreen version click the horse to make it jump.

The touchscreen version is at <https://scratch.mit.edu/projects/521557858>
